I. INTRODUCTION

Test algorithm rendering:

Algorithm 1: Semantic Rationale-Consistency Filter

Input: Dataset $\mathcal{D} = \{(X_i, R_i, \tau_i, C_i)\}$, Taxonomy keywords $\{\mathcal{K}_\tau\}$ **Output:** Clean distilled dataset $\mathcal{D}^*$

1) Initialize $\mathcal{D}^* \leftarrow \emptyset$
2) **for each** sample $\in \mathcal{D}$ **do**
3) $\mathcal{K}_{\text{matched}} \leftarrow \{w \in \mathcal{K}_\tau : w \in R\}$
4) Score $\leftarrow \min(1.0, 0.4 + 0.2 \cdot |\mathcal{K}_{\text{matched}}|)$
5) **if** $|R| \geq 40$ **and** *then* D* $\leftarrow$ $\mathcal{D}^* \cup \{(X, R, \tau, C)\}$
6) **return** $\mathcal{D}^*$
